DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 26 and 27, drawn to method of fabricating a waveguide grating coupler, classified in class 385, subclass 129.
- II. Claims 1-25, 28-50, and 73-99, drawn to an integrated optical apparatus, classified in class 385, subclass 14.
- III. Claims 51-72, drawn to waveguide grating coupler apparatus, classified in class 385, subclass 37.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by the process of forming alternating layers of material having relatively high and low refractive indices and thicknesses.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process

Art Unit: 2883

(MPEP § 806.05(f)). In the instant case the product can be made by the process of forming alternating layers of material having relatively high and low refractive indices and thicknesses.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the scattering elements of the combination do not necessarily need to have a characteristic which varies in magnitude. The subcombination has separate utility such as coupling light of a substantially Gaussian mode profile between a waveguide and an optical element.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2883

This application contains claims directed to the following patentably distinct species and subspecies of the claimed invention:

Species 1: The specifics being the inclusion of Distributed Bragg Reflector(s) (DBR) for reflecting scattered light towards the gratings, related to claims 1-17, 38-40, 52-63, and 74-85.

Subspecies 1.1: The specifics being the inclusion of both segmented and unsegmented scattering elements, relating to claims 1-17, 38-40, and 52-63.

Subspecies 1.2: The specifics being the exclusion of both segmented and unsegmented scattering elements (including the possibility of either segmented or unsegmented scattering elements, but not both), relating to claims 74-85.

Species 2: The specifics being the inclusion of a gas-filled cavity for reflecting scattered light towards the gratings, relating to claims 18-25, 41-44, 64-66, and 86-92.

Subspecies 2.1: The specifics being the inclusion of both segmented and unsegmented scattering elements, relating to claims 18-25, 41-44, and 64-66.

Subspecies 2.2: The specifics being the exclusion of both segmented and unsegmented scattering elements (including the possibility of either segmented or unsegmented scattering elements, but not both), relating to claims 86-92.

Currently, claims 26-37, 45-51, and 67-72 are generic as related to species, and would be included in both subspecies 1.1 and subspecies 2.1.

Currently claims 73 and 93-99 are generic as related to species and would be included in both subspecies 1.2 and subspecies 2.2.

Art Unit: 2883

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species and subspecies for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2883

Page 6

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry Martin Blevins whose telephone number is 571-272-8581. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G. Font can be reached on 571-272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
